DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1 – 5 are rejected under 35 U.S.C. 102(b) as being anticipated by Tsukamoto (US 2002/0000519).

Tsukamoto has a semiconductor exposure apparatus (the light source, not shown is inherent). A closed optical system is shown at least in Fig. 1. Paragraphs [0041, 0077] disclose that a switching valve (14) adjusts the flow rate of the supplied gas in accord with the state of exposure operation. The flow rate is restricted during the exposure period. In paragraphs [0002, 0075] an excimer laser source, such as ArF and KrF is suggested. Paragraph [0007] states that the purging gas is inactive.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Tsukamoto (US 2002/0000519) alone or in view of Arakawa (US 2002/0057422). Tsukamoto does not disclose further manufacturing steps, one of ordinary skill in the art at the time the invention was made would have known that exposing the mask onto the substrate in only one of the steps in producing a semiconductor device and would have recognized that other steps were needed. Arakawa is an example of a reference that discloses a semiconductor exposure apparatus and further manufacturing steps, such as developing and etching (see Fig. 11). One of ordinary skill in the art, then would have been motivated to disclose other steps to produce the completed semiconductor device.
